Original publisher: Adelphi, Md. : Army Research Laboratory, 2000 OCLC Number: (OCoLC)688599354 Subject: Natural computation. Excerpt: . . . Brooks (1987) argued persuasively that there are no magic solutions to the fundamentally difficult problems associated with software development. There are no panaceas-no miracle cures that will automatically increase our productivity by orders of magnitude while eliminating all the software bugs. However, by focusing on the development of generic tools, software developers can reduce software bugs, and software development can be moved to a higher plane. Ends and Means 4. 3 Coad and Yourdon (1991) caution software practitioners that if the application of a software engineering method produces a monument of paper, then something is wrong-in the method, in the application of the if we lose sight of people and method, or perhaps in both. They lament, begin producing charts, diagrams, and piles of paper as ends italics added unto themselves, we fail to effectively communicate. Currently, most software methods generate displays in the form of plots or tables that can be used as records but not as dynamic relationships. Contrast this with a scientists intuitive and interactive use of tables in books. A scientist can readily use a table on paper either to read or as a relation in his or her computing. Since computer tools are not now available that treat tables as relationships, their reuse by other software is limited and circuitous-reuse depends, in fact, on the scientists intervention based on understanding-just as with a paper table. In a similar manner, some programs can generate graphs in vivid colors and multiple dimensions and animations (see fig. 4, generated by Mathematical (Wolfram, 1991)). Figure 4. A three-In...
