General Books. Paperback. Book Condition: New. This item is printed on demand. Paperback. 76 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891. Excerpt: . . . ON THE DEVELOPMENT OF THE POSTERIOR COLUMNS, OF THE POSTERIOR FISSURE AND OF THE CENTRAL CANAL OF THE SPINAL CORD. By Arthur Robinson, M. B. , Senior Demonstrator of Anatomy in the Owens College. (Plates II. and III. ) Introduction. The earliest observations on the development of the central nervous system of mammals and birds made known to us that the completion of the central canal of the spinal cord was closely associated with the formation of the posterior columns and the production of the so-called posterior fissure. With regard however to the exact manner in which each of these several structures is formed, as well as to the precise relations which they bear to each other during the different phases of their development and growth, there still exist very marked differences of opinion. In consequence of these differences, I was led, during the course of a series of embryological investigations commenced three years ago, to enter somewhat fully into a consideration of the main facts concerning the development of the central canal, and of the posterior columns and fissure. In this paper I venture to record the results of my observations on these points, together with certain conclusions, which it seems to me, may justifiably be drawn from them. This I do with the less hesitation since, in more than one particular, the conclusions differ from those of previous observers. The posterior columns consist of nerve fibres embedded in the meshes of a fibrillar...
